

Webinar on CCS on Waste-to-Energy:

What are the results and the experiences from Fortum Oslo Varme's pilot plant?

Time: May 14th 2020, 09:00 – 11:00.

Location: Webinar (Teams).

How much CO₂ was captured in the 5500-hour carbon capture test? How did we do it? What are our plans going forward?

We enjoyed several important breakthroughs in our CCS project in 2019. Now we want to share our experiences and results from the 9 months of pilot plant operation with amine post-combustion capture technology with the rest of the Waste to Energy-family and CCS partners.

We would like to share our very encouraging results in order to stimulate dialogue, discussions and cooperation for future CCS development and innovation.

The topics that will be covered in the seminar includes:

- Carbon capture in a waste-to-energy perspective
- Amine emissions
- Capture efficiency
- Degradation
- Pilot operation
- Process description
- Energy requirement
- CO₂ product quality
- Measurement campaign and test program
- Pilot plant rental possibilities

Sign up for the webinar before May 11th by sending an email to Jorgen.thomassen@fortum.com. Please include your name(s) of participants, position and firm and mark the subject field *Webinar - Carbon Capture Pilot Plant Results and Experience*. Invitation will be distributed after sign-up deadline.
